

ABSTRACT OF THE DISCLOSURE

An air conditioning ducting for a rear seated passenger is provided in a front seat to supply the air conditioned in an air conditioning unit to the rear seated passenger. The apparatus has a flexible ducting, which can be transformed in conjunction with the travel of the front seat or a folded condition of the front-side seat. A flexible duct member in the ducting may have a U-shape to be transformed, and/or the ducting can be detachable from a duct which lead the air conditioned in the air conditioning unit to the ducting in conjunction with a folded-up or removed condition of the front seat.
